

Janak Singh Raikhola — Life Story & Journey

Background

I was born on 18th May 1998 (Jestha 4, 2055) in a remote village in Darchula, Nepal, where internet access and technology were very rare. Growing up there, life was simple. We did not have access to the internet or modern devices the way people in cities did.

In 2063, when I was around 8 years old during Dashain holidays, my cousin, who was studying in Mahendranagar city, showed me Facebook for the first time on a Nokia C201 phone using UC Browser. That moment felt magical. It became my first real connection to the digital world and opened a new curiosity inside me.

With his help, I created my first Facebook account. I did not fully understand it then, but it marked the beginning of a passion that would shape my future.

Growth

From a remote village with almost no technology, I slowly started learning. I became curious about how the internet worked, how systems were built, and what made digital products valuable. That curiosity gradually became my life direction.

I worked in mobile repair shops, sales in computer and laptop stores, and in hardware shops assembling desktops. Later, I shifted into internet research, which led me deeper into AI, blockchain, and backend systems. It was not a polished path, but it was a real one.

I was born in Nepal and studied in Nepal. I am proud of my roots. I believe it is not where you start, but the strength of your discipline and the clarity of your purpose, that defines what you become.

Today

Today, I work as a backend developer, software engineer, and system architect. I have built APIs, backend systems, and production solutions for clients and companies. My work spans blockchain engineering, AI-driven systems, IoT research, and practical software architecture.

Now I am building my own startup, FutureStoreAI (FSAI). It is the same dream that started in a small village: to turn local ambition into global impact and to build technology that solves real problems.

For me, technology is not only a profession. It is an emotion, a calling, and a way to transform my story into something useful for the world.
